

Tips for Different Views During Zoom Workshops

Please note that you can change your view of the workshop by clicking on the three dots on the top right side of your photo and selecting “pin”. This will make the image larger on the screen for you. Alternatively, you can use the slide bar and moving it back and forth, to make one image larger than the other. This slide bar is the short set of double lines running perpendicular on the screen, in between the PPT slide and three participants below.

You also have the option to view your screen as speaker view, gallery view or full screen view by using the top right pull down menu.
